

# Workshop 2: Github + Pong Game

EVHS Programming Club 2019

<https://discord.io/evhsprogrammingclub>

<https://github.com/EVHSProgrammingClub/EVHS-Programming-Club-Public>

# Part 1: Github

# What is Github?

- Software version control
- A place to store files
- Tracks changes
- Organizations
- Organized
- Fast
- Host Websites on repo
- Command line interface
- Online website interface

<https://github.com/EVHSProgrammingClub/EVHS-Programming-Club-Public>

# What can you do?

Add files:

```
git add .
```

Stage files:

```
git commit -m "message here"
```

Push files:

```
git push
```

Pull files:

```
git pull
```

# Gitbash

# Github website

Sign up

GitHub is a development platform inspired by the way you work. From **open source** to **business**, you can host and review code, manage projects, and build software alongside 40 million developers.

.....

Make sure it's **at least 15 characters** OR at least 8 characters including a number and a lowercase letter. [Learn more.](#)

## Repositories

Find a repository...

You've been added to the EVHSProgrammingClub organization!

Here are some quick tips for a first-time organization member.

- Use the switch context button in the upper left corner of this page to switch between your personal context (xarmeetx) and organizations you are a member of.
- After you switch contexts you'll see an organization-focused dashboard that lists out organization repositories and activities.

History

```
1 This is for your personal projects.
2
3 1. Make a folder with your first name.
4 2. Inside the folder, make a yourname.md file and put
5   - your first and last name
6   - your grade
7   - something about you
8   - fav color
9   - programming languages you know
10 (if you do know how md files work, feel free to make this prettier)
11 3. Put your personal project in here. (or files with links to your repo on github)
12 4. Thats all for now!
```

Commit files

Push files

# Cloning a Repository

git clone “link here”

- Makes a synced copy of the repository on your laptop, where you typed git clone
- You can now change the files in this repository, add, commit, push, and pull

# Adding files

```
git add .
```

- Tells github which files to track and which files to upload
- Adds all the changes

# Commiting

```
git commit -m "message here"
```

- Stages the files
- Last step before pushing
- Gives each file a message

# Pushing

`git push`

- Pushes all your changes, new files, deleted files to repository
- Adds commit message to each file

# Pulling

`git pull`

- Pulls the changes from the repo.
- If someone else has made a change, you will receive their changes.

```

# Part 2: Pong Game

# Starting code link:

<https://repl.it/@Ccde123456789/Starting-Code-for-Pong>

# Phase 1:

## Draw the left paddle

(Use object properties, and the variables there)

`fillRect()` is your friend for this

## And draw the ball

## Phase 2:

Create a right  
paddle object.

(Make sure it's on the right size of the screen)

(Use the left paddle as a guide)

Draw the right  
paddle

## Phase 3:

For the dotted line, here's the code: try to understand it before you move on.

```
for (let i = grid; i < canvas.height - grid; i += grid * 2) {  
  context.fillRect(canvas.width / 2 - grid / 2, i, grid, grid);  
}
```

Add the walls.

And the dotted  
line

# Objects

## Phase 4:

The loop adds one frame after another. Each frame, the position of these objects changes a little.

Make the ball  
and paddles  
move

## Phase 5:

Every key has a key-code.

The provided ones are for the  
arrow down and up

The keylistener edits the speed of the paddle when the key is pressed down. When it's picked up, the paddle speed returns to 0.

Add key  
listeners for the  
left paddle

# Phase 7:

Play around with it, and try to understand how it works.

Fill in the  
collision  
function

[https://developer.mozilla.org/en-US/docs/Games/Techniques/2D\\_collision\\_detection](https://developer.mozilla.org/en-US/docs/Games/Techniques/2D_collision_detection)

## Phase 8:

Use the function built in phase 7

Make sure the collision won't  
happen in multiple frames

Also remember to think of what will happen to the ball's speed when it'll bounce off the paddle.

Make the ball  
bounce off  
both paddles

## Phase 9:

What will happen to the  
displayed points?

Reset the ball  
when a point is  
scored on the  
right side

Think about what will happen to the ball. Which way will it go?

# Phase 10:

What will happen to the  
displayed points?

Reset the ball  
when a point is  
scored on the  
left side

Think about what will happen to the ball. Which way will it go?
